Art Unit: 1617

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I: Claims 1-6, and 12-14, drawn to a composition, classified in class 424, subclass 401.
- II. Claims 7, 10, and 11, drawn to a method of reinforcing the water retaining ability of horny layers, classified in class 514, subclass 847.
- III. Claims 8, 10, and 11, drawn to reinforcing the skin barrier functions, classified in class 514, subclass 613.
- IV. Claims 9, 10, and 11, drawn to a method of treating hair, classified in class 424, subclass 70.1.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of reinforcing water retaining ability of horny layer can be practiced by using a materially different type of a moisturizing composition.

Similarly, inventions I and III are distinct, since the method of reinforcing skin barrier function as claimed in invention III can be practiced by using skin barrier compositions that are materially different from the product of invention I. For example, skin barrier compositions comprising sterols and ceramides are well known in the art.

Art Unit: 1617

Inventions and I and IV are also indistinct, since the method of remedying excessive dry hair as claimed in invention IV can be practiced by using compositions that is materially different from the composition of invention I. For example, treating dry hair with emollients such as olive oil is well known in the art.

Inventions II and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the method of reinforcing the water retaining ability of homy layer and the method of remedying excessive hair dryness are not disclosed as capable of use together, and they have different functions and effects.

Similarly, inventions III and IV are unrelated. The claimed method of reinforcing skin barrier function and the method of remedying excessive hair dryness are not disclosed as capable of use together, and they have different functions and effects.

Inventions II and III are also unrelated, as the claimed method of reinforcing water retaining ability of herny layer as claimed in invention II and the method of reinforcing skin barrier ability are not disclosed as capable of use together, and they have different functions and effects.

These inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter. The search required for Group I is not required for Groups II, III, or IV. The search required for Group II is not required for Groups III or IV. The search required for Group III is not required for Groups IV. The claims as presented would impose serious

Art Unit: 1617

burden on the examiner to conduct meaningful search and examination. Restriction for examination purposes as indicated is thus proper.

Claim 14 is generic to a plurality of disclosed patentably distinct species comprising the diamides of formula (C). Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention and/or a single disclosed species to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gina C. Yu whose telephone number is 703-308-3951.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreeni Padmanabhan can be reached on 703-305-1877. The fax phone numbers for the organization where this application or proceeding is assigned are 703-
